OPERATIONS DIGEST

SITUATION: Currently we as Sea Org. have the job of keeping the Sea Org. and all Scientology Orgs on their purpose line. The Sea Org is to get ethics in on the planet. The outer orgs are to get people in and apply STANDARD TECH and get all on this planet up to Clear.

We are faced with a society in which governments aren't governing, SPs are fighting imaginary Martians, and a planet whose inhabitants must have an engram to run out on the 4th Dynamic.

This is briefly the situation at this time.

Our approach to this is developed from establishing our political objective, legislation, and programmes.

Consider the problem of 4th Dynamic engram requiring an auditing session, then you have the political objective.

POLITICAL OBJECTIVES: Political objectives - Set up those conditions under which the session can occur and can continue on the 4th Dynamic.

Political objective depends on research on 7 and 8. This objective is important, as it is a true objective. Viet Nam has no political objective which can be executed. Hence this country is locked in a senseless battle. Future is not planned in terms of battle. Future is planned in terms of objectives obtained without exciting horror of populations. Our political objective is not the re-establishment of the Galactic Confederacy.

Question: What auditor will the fourth Dynamic accept?

Answer: It will accept that auditor or regulator which it had and who had confidence in even though betrayed.

This then explains why the S.C. symbol of the Confederacy works.

The Confederation's political objectives were not perfect. Any force without a social objective is far out.

The technology and force had a political objective with a social objective.

So our job as the Sea Org is to make the environment in which the engram of the fourth dynamic can be audited out.

The recent Mission No. 'Mill 10' was an example of what happens when there is not an environment in which the auditing can occur. The RS as the Sea Org fell down down down in ensuring this environment was available. Flubs like this have far reaching effects as it detracts from the purpose line. Flubs out into and delays research.

LOGISTICS: The logistics we are concerned with are the where-with-all and enough of it available to safeguard the environment, to allow auditing to occur and the engram to be continued to be run.

This is assisted by the fact that the PC has to pay, as it has been discovered that if the PC doesn't pay the auditing is not valuable.

The logistics necessary are those necessary to carry out the steps of the political objective as they appear.

Logistics are what it takes to bring about the political objective.

The planning on this line is without public violence. The future is not planned in terms of battle. What we have to do on this line is to get the basics in.

Disasters occur when mistakes are not planned for. Patrol of action then are necessary. Other points of control are vital to pick up the ball and run with it. This was seen in the failure of Mission AO UK. The ball was then given to OTL WW who has done an excellent job and the Mission is going into the final phase.

So planning must take into account for the leader of patrol 6 to meet a native girl and hold up the action for a week while he "cement public relations."

So adequate records of all activities must be kept so that the ball can be picked up and given easily to another control point.

GRADIENT APPROACH: The approach to the political objective is to get planning done on a realistic line. Get the orgs to produce standard ethics, tech, and admin and keep them delivering STANDARD TECH. Keep on the purpose line. Do proper evaluations of situations. Intelligence must be effective and smartly done.

How a situation deteriorates

1. Orgs failed with ethics and tech.
2. Intelligence failed.
3. Nothing done about the situation thereafter.

The Sea Org comes in on number three.

The orgs do the auditing and audit out the engram.

The Sea Org brings about the conditions by which the engram can be run.

Logistics are what it takes to bring about the political objective.

This then is a digest of operations at this time.

(Data taken as notes from a talk by the Commodore.)
